---

Mike,

I'm reviewing the proposal apparently prepared by Dow/Union Carbide to develop a clean-up goal for CNs using the EqP approach. I've asked GLNPO to find out what TOC values they are planning to use. Just checked your sediment surveys and it looks like you didn't measure TOC during the two events - wanted to make sure that this is correct. If it is, then I assume that GLNPO's measurements would be used.

Thanks.

Carolyn
